The California Geographer • Volume 44, 2004
Introduction

This new cumulative index of articles and book reviews from *The California Geographer* covers volumes 30 through 43, 1990 through 2003. Just looking through the index of authors, one can see a surprisingly broad cross-section of accomplished geographers now dispersed throughout the U.S. and elsewhere. There are many articles on different aspects of California, both physical and human, as well as regional studies of local places in California. Beyond the state, the articles cited here also range widely in locality, including papers sited in Africa, Asia, Australia, and New Zealand, and Europe as well as in North American places outside of California. It is interesting to note that no papers on South America were published during this period. Topics are equally broad, representing nearly all subdisciplines of geography, from agricultural geography to urban geography. There are quite a few useful papers on geographic education, as well as some that provide insights into specific departments of geography in California.

The index includes all papers published in *The California Geographer* over the past thirteen volumes. Its organization is consistent with the previous indexes, including three sections: Authors, Regions, and Topics. The authors listed in Section 1 include contributors of book reviews and papers, but not abstracts of papers presented at the California Geographical Society meetings.

Rebecca Davenport, Compiler
Dolly Freidel, Editor, *The California Geographer*
